## Solid Wood Countertops

At Thaweephan, our aim is not just to produce beautiful, durable countertops of the highest quality. We also care about our customers and our environment. That is why we use glues and oils that are food safe and source our raw materials from sustainable and responsible suppliers.

A wooden countertop gives a warm, luxurious feel to any kitchen without compromising on quality, durability or functionality. It offers a unique and natural look that cannot be achieved by any other material.

This natural look and feel is at the heart of our product philosophy. That is why all our wooden countertops are treated with natural wood oil, preserving the natural characteristics of the wood whilst making it safe and easy to maintain for the home owner.

All of our countertops are custom made to order, giving kitchen designers a wide range of options to create bespoke and functional space solutions that will look natural and beautiful for many years to come.

## Work of Art

All our countertops are hand made and finished by our own team of experienced and professional carpenters.

Every countertop from Thaweephan is unique, both in terms of look and design and our team thrives on the challenge of making custom countertops to the finest quality workmanship, every time. To achieve this, we need a dedicated team with the outmost focus and attention to detail throughout the design and manufacturing process.

This is how we offer kitchen designers the flexibility to design and create spaces that can truly reflect each customer's individual needs and requirements.

## Natural Wood Oil

All our countertops are factory finished with highest quality natural wood oil that creates a natural, food safe, stain resistant and easy to maintain surface.

Please follow our care instructions to ensure your countertop stays beautiful and durable for years to come.

## Choosing the right sink

It is very important to choose a high-quality, under-mountable sink with a built-in tap for a solid wood countertop.

Under-mounting of the sink allows the wood around the sink edge to breathe and fully dry, minimizing problems with black marks and mold build up. Under-mounting of the sink is done at our factory with specialist equipment and your countertop is delivered with the sink already installed.

Our experienced team is always available to assist kitchen designers with technical advice and support.

## Maintenance & Care

Natural wood will always, no matter how well it is treated, remain a living material that changes and adjusts to its environment. All our solid wood countertops have undergone a process of oiling in which they are treated and polished, to ensure that the natural wood oil penetrates deep into the wood.

To maintain optimum strength and resistance we recommend that the countertop is maintained and treated with oil 2-4 times per year. Do not place very hot items such as pots and pans directly onto the countertop as they may burn or discolour the surface.

For daily cleaning, we recommend using water or a mild soap solution. Products containing detergent will dry out the countertop and making frequent oiling necessary.

Please refer to our Installation and Maintenance guide for more information.
